

Request for Proposal

Below is a high level overview and target dates for the MVE scope for Medavize Inc.

I. Timeline

MVE will be completed in <3 months from signing of SOW.

II. Scope

Medavize will provide Figma wireframes and corresponding requirements. General features in the MVE include:

1. Enrollment for Patient and Caregiver
 - a. Enrollment will be standard: enter a few personal details, validate e-mail/phone, set up password.
 - b. Ability to enroll via Google or Apple
2. Health Data Insights
 - a. Data inputs include:
 - i. EHRs
 - ii. Apple Health
 - iii. Google Health
 - iv. Manual entry of vitals
 - v. Spreadsheets and other digital documents (Word, PDF, pictures, etc).
 - vi. Audio
 - vii. Text
 - viii. Scan in manual documents and feed them to a usable database
 - b. Data Insights:
 - i. Connect to AI (Claude)
 - ii. Pass data through rules and/or AI via a pre-defined prompt framework for interpretation into insights on health status in simple terms that a customer can understand.
 - iii. Visual presentation of health insights via a humanoid image
 - iv. Simple to understand findings, with ability to drill down to learn more

3. Doctor Visit Prep and Support

- a. Customer will have the ability to prepare for doctor visits. The app will factor in the latest medical insights and will create a document with this summary, as well as a list of questions for discussion, and will list current meds.
- b. Patient (customer) will have the ability to share the document with medical staff and caregiver.
- c. App will have the ability to listen to the conversation between a patient, caregiver and doctor during a doctor visit and create a summary of that discussion for the patient and caregiver. The summary can be shared with the doctor.

4. App specifics and listing/launch

- a. User pricing: One month free then subscription based (monthly or annual)
- b. Incorporation of app tracking tools like Google Analytics, PostHog, or Amplitude.
- c. Submission of app to app stores (Apple and Google)
- d. Post app launch - bug fixes

All data will be stored in a secure and auditable format within the AWS environment and must be HIPAA compliant. All development work will be completed in Medavize's AWS environment. The project output will include proper system architecture, data structures, implementation, app store launch, documentation, and must be HIPAA compliant.

III. Please provide your proposal with the following:

1. Make up of Team
2. Earliest start date
3. Time to complete the MVE
4. Estimated pricing for
 - a. Full project team
 - b. Augmented team
5. Sample MSA
6. Examples of similar MVE projects
7. Explanation of your AI Expertise
 - a. Examples of AI projects you have worked on
 - b. Examples of your use of AI for development and/or as part of the product
8. Explanation on how you will connect with EHRs.
 - a. Describe the challenges you've encountered in the past
 - b. How you overcame these
 - c. Recommendations you've provided to your past clients on optimal flows

- d. Usage of EHR consolidators versus direct connections to largest EHRs (please provide us your thoughts on this and any experience)
9. Also, please price (this is optional just in case we need this service):
 - a. AI Engineer
 - b. UX Designer
 - c. Systems Architect

IV. Additional Questions for Respondents

Project Fit & Timeline

1. How would you onboard into an existing system within 2 weeks?
2. What would put a 2–3 month MVE timeline at risk, and how would you mitigate it?

Commercials

1. Do you support a cash + equity payment structure?
2. What does a typical payment schedule look like?

Team & Engagement

1. Who is the technical lead on this engagement, and can we interview them before signing?
2. Will the team presented in your proposal be the team that does the work?
3. How do you manage sprint delivery with external stakeholders?

Design & Development Process

1. What is your design-to-dev workflow? How long does each stage take?
2. How do you ensure pixel-perfect implementation from Figma?
3. How do you incorporate AI-assisted development into your workflow, and what guardrails do you have around it?

Work Samples

1. Provide 1–2 examples of a mobile app taken from Figma to production. For each, briefly describe your role, the timeline, and the outcome.

Architecture & Engineering

1. How would you architect the system to be modular and easier to maintain?
2. How do you structure APIs for scalable health data apps?
3. How do you handle performance and state management?

Tooling & Collaboration

1. Will your team work inside our AWS accounts and repos?
2. Will you use our JIRA or yours? If yours, will you grant us access, and provide a full data export to Medavize at project close? If you use something other than JIRA, please describe.
3. How do you handle documentation, and what does your handoff package look like at the end of an engagement?

IP & Legal

1. Is Medavize the IP owner of all work produced?
2. Do you use any third-party libraries or open-source components with licensing restrictions?

Security, Compliance & Privacy

1. What is your experience with HIPAA compliance?
2. How do you follow client-defined security controls?
3. How do you handle audit logs and PHI separation?
4. Do you assist with SOC 2 certification?
5. Have you ever failed a security audit or compliance review? If so, how did you resolve it?
